Total Cost of Ownership

Full Web, only a browser needed Scalable, in premises or SAAS

Handle heterogeneous envs.
Support mobile devices
Be ready for future usage

need

No download at client side Ensure trust chain Control what is viewed, when, how

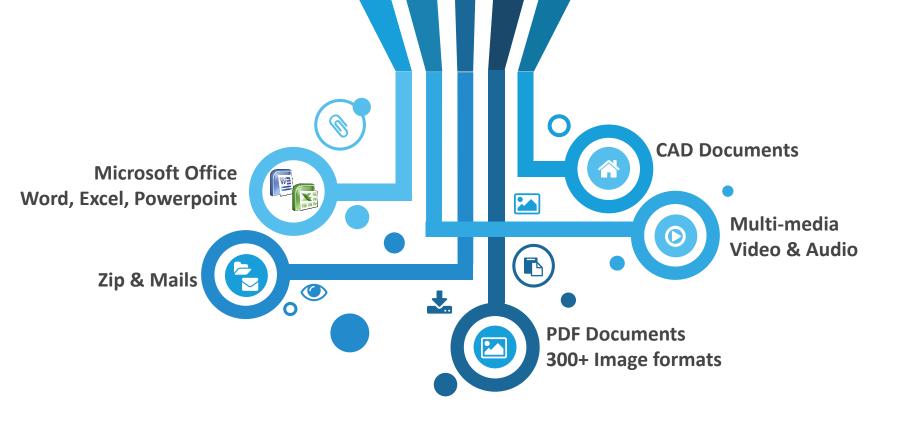

pain

Supports all browsers:

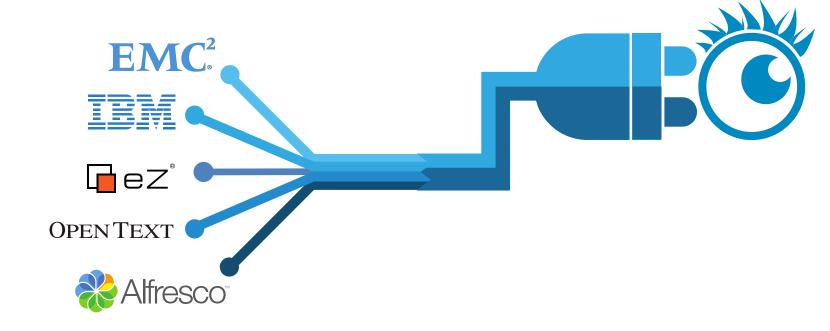

Fully integrated with all major ECM players

Because speed matters

No application downloaded at client side. Extremely fast startup time.

Efficient pro-active Streaming
Open large documents instantly
Pages rendered on-demand

Ease of use

Navigate your document the way that fits you the best.

Review your document and add valuable information on top of them.

Find the information you need within your document content.

Key Customer Benefits

100% web-based

User experience

Multi-format

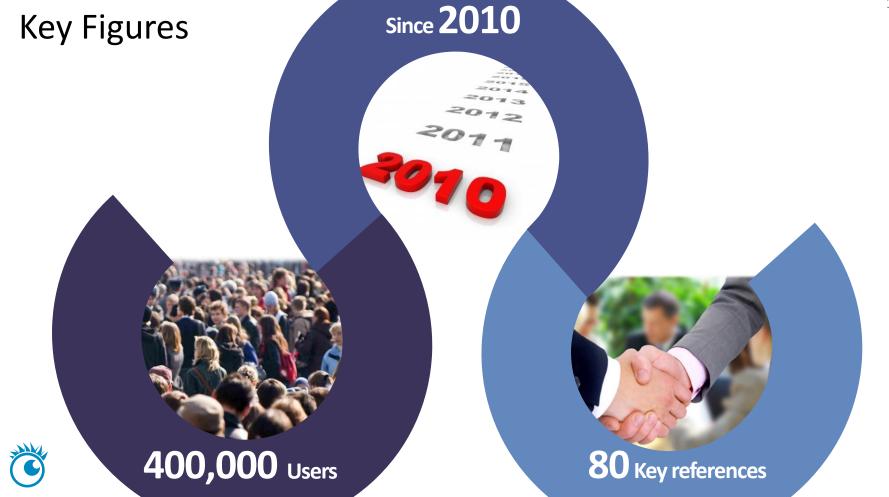

Annotations

Streaming & Performance

ARender Architecture

Web Browser

The document opens in the Web Browser

J2EE Application Server

ARender can be deployed on any Web Application Server.

Best Practice: Deploy on the same ECM Frontend servers

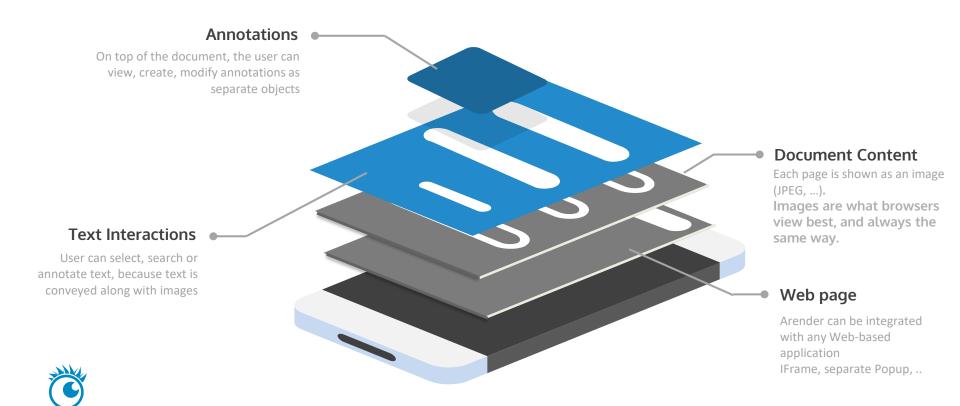

Standalone JVM Service

ARender Rendition Server is a standalone Linux / Windows service

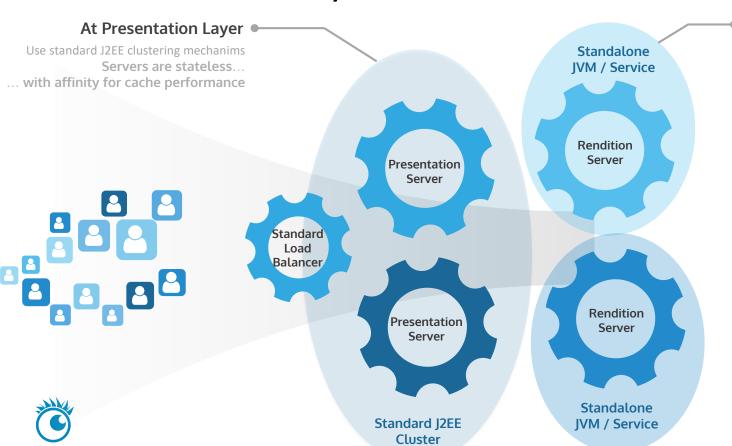

Best Practice: as close to the Content Server as possible

At Client Side: Multiple Layers

ARender Scalability

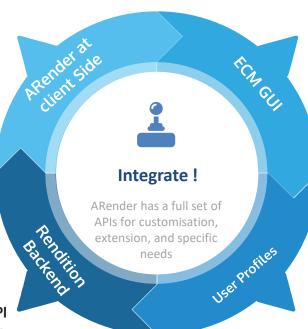

At Rendition Layer

ARender has a specific, wellproven Farming Mode, including High-Availability + Load-Balacing features.

ARender Integration APIs

ARender JSAPI

At Client side, ARender can be deeply integrated with business applications. Interacting with actions performed on the document, reacting to document selection change, creating new documents...

ARender ECM API

At Server side, ARender has a very modular architecture to be able to interact with various ECM vendors. This covers:

- Document content,
- Security concerns,
- Annotation get, save, update
- Document metadata,
- New content creation

ARender Rendition API

Useful to integrate business-specific formats (eCTD, ...)

ARender behavior and look & feel can be heavily customized on perprofile basis.

These settings can still be overridden by ECM-driven contextual settings.
